

Nottinghamshire and City of Nottingham
Fire and Rescue Authority

OPERATIONAL ACTIVITY UPDATE 2013

Report of the Chief Fire Officer

Date: 28 February 2014

Purpose of Report:

To update the Fire Authority on the operational activity levels during the calendar year 2013.

CONTACT OFFICER

Name : Frank Swann
Chief Fire Officer

Tel : (0115) 967 0880

Email : frank.swann@notts-fire.gov.uk

Media Enquiries Bridget Aherne
Contact : (0115) 967 0880 bridget.aherne@notts-fire.gov.uk

1. BACKGROUND

- 1.1 During 2010 Nottinghamshire Fire and Rescue Service (NFRS) undertook the most comprehensive review of its operational activity since 1986. Under the term “Fire Cover Review”, the Service ‘risk-profiled’ the whole county against a risk matrix and looked at how the location and provision of resources matched the risk.
- 1.2 As a result, on 16 December 2011, following a period of scrutiny and consultation, the Fire Authority agreed changes to the operational model. These were based on a series of recommendations from the Chief Fire Officer.
- 1.3 Additionally, the Fire Authority asked to be informed as to all future operational activity on an annual basis, to ensure that the level of operational resources best matched the risk profile of the county and city. This report introduces these statistics for the calendar year 2013 (January to December).

2. REPORT

RISK PROFILE

- 2.1 The Service uses its own in-house team to review and update the risk model. This model includes population factors over the area of the county, including key elements linked to fire, such as deprivation. This gives the Service an objective evaluation of risk and supports on-going work with local officers involved in district profiling.
- 2.2 During 2013 the risk profiling has been updated and there is no significant change to the county risk profile. Some minor adjustment within some super output areas (an area where the risk is measured and rated) has been detected, but this is not significant enough to present any issues for the Fire Authority to consider.
- 2.3 The risk areas are still rated within the original three agreed by the Fire Authority and utilise the terms:
 - Low;
 - Medium; and
 - High Risk
- 2.4 To determine these categories, geo-coded datasets for the following incident types continue to be used:
 - All incidents where injuries have occurred;
 - Incidents where there has been a recorded fire death;
 - Special service calls involving any risk to life;
 - Any fire in a non-domestic property which has been the result of a deliberate act;
 - Indices of multiple deprivation.

- 2.5 The methodology ensures consistency in the Service's approach and also utilises the process which was externally validated by Nottingham Trent University and accepted by the Fire Authority as part of the original Fire Cover Review.

ACTIVITY LEVELS

- 2.6 The full activity levels for the Service are appended to this report in their entirety. The five year range has been included so that the Fire Authority can not only see the figures for 2013, but also compare them to the preceding four years.
- 2.7 In total the number of incidents for 2013 was 9765, which was a reduction on the previous year from 10323, and a reduction over the five years of just under 5500 incidents from 15199 (2008).
- 2.8 Of these 9765 incidents, approximately 4000 were false alarms (not always automatic detection devices), 1600 were primary fires (involving property), just under 500 were road traffic collisions, and nearly 2000 were secondary fires (grassland, rubbish etc). 1500 were 'other calls', which shows the diverse role of the Service today, as these include a range of special service type incidents, including flooding and other rescue work. With the exception of false alarms which saw a notable drop on the previous year, the figures generally show a plateau. Again, as in 2012, the most pleasing aspect was the reduction in false alarm malicious calls.
- 2.9 The busiest station in the Service was Central, which recorded over 1500 incidents. This was still a reduction of over 200 in the previous year.
- 2.10 Mobilising levels, which include all dispatches, equally fell from 15500 to 14700 in 2013.
- 2.11 In terms of activity, Saturday and Sunday remain the busiest days of the week, although the difference between the weekend and week days was less significant. As in the previous year, August remains the busiest month.
- 2.12 The Service still deals with the majority of incidents utilising one or two appliances (fire engines) and the Service only used 10+ appliances on five occasions during 2013 which was two more than in 2012. This shows that despite the reductions to fleet made during 2013, the Service still retains capacity to respond effectively. The reduction of the retained appliance from Arnold and the part-time appliance from West Bridgford has had no impact on overall service delivery.
- 2.13 In 2013 the Service had three fatalities from fire which was a decrease on the previous year (one female, two male). These figures remain low for a population in excess of one million, and the Service still targets a zero outcome. The Service continues to work with partners and other agencies to address the underlying causes.
- 2.14 Currently the Fire Authority maintains a single measure for attendance standards to incidents, that being 90% of incidents will receive an attendance in ten minutes. During 2013 the actual achieved for all incidents was 76% and for

fires in dwellings this was marginally better at 86%. This was a slight decrease on the previous year of 3% for all incidents, but an improvement of 2% for fires.

- 2.15 As previously, the information and data presented will be uploaded to the Service's website so that the public will be able to access all of the relevant data.
- 2.16 In terms of the next steps, a more detailed analysis of these figures will be undertaken to ascertain any underlying causes and a further report will be brought to the Fire Authority later in 2014 with any recommendations.

3. FINANCIAL IMPLICATIONS

Whilst there are no specific financial implications arising from this report, careful monitoring of the operational activity levels helps to inform the Service with its financial planning.

4. HUMAN RESOURCES AND LEARNING AND DEVELOPMENT IMPLICATIONS

Changes to the establishment have significant human resources and learning and development implications for the Service. Although this report does not propose any specific changes, the information contained within it may influence any future decisions.

5. EQUALITIES IMPLICATIONS

There are no specific equalities implications arising from this report.

6. CRIME AND DISORDER IMPLICATIONS

Section 17 of the Crime and Disorder Act 1998 states that "it shall be the duty of each authority to which this section applies to exercise its various functions with due regard to the likely effect of the exercise of those functions on, and the need to do all that it reasonably can to prevent, crime and disorder in its area". This report does not contain any implications which would affect that duty.

7. LEGAL IMPLICATIONS

- 7.1 Part 3, Section 21 of the Fire and Rescue Services Act 2004 requires the Secretary of State to prepare a National Framework. This document places a duty of Fire and Rescue Authorities to 'produce a plan that identifies and assesses all foreseeable fire and rescue related risks that could affect its community'.
- 7.2 By continually updating and reviewing the operational activity levels and the risk profile, Nottinghamshire Fire and Rescue Service ensures that the Fire Authority continues to meet such duties.

8. RISK MANAGEMENT IMPLICATIONS

The update and analysis of the risk profile and the operational activity levels are part of a risk management process. By carefully monitoring how these aspects are changing, the Authority can continually monitor the impact on its service provision.

9. RECOMMENDATIONS

It is recommended that Members:

- 9.1 Note the operational activity levels for 2013;
- 9.2 Task the Chief Fire Officer with any further reports on these outcomes to be brought to a future meeting detailing any recommendations.

10. BACKGROUND PAPERS FOR INSPECTION (OTHER THAN PUBLISHED DOCUMENTS)

None.

Definitions:

Primary fire locations / properties are:

- ***Buildings including mobile homes fit for occupation*** (i.e. not wholly derelict), and those under construction.
- ***Caravans, trailers etc.***
- ***Vehicles and other methods of transport*** (not derelict unless associated with business e.g scrap metal)
- ***Outdoor storage, plant and machinery***
- ***Agricultural and forestry premises and property***
- ***Other outdoor structures*** - including post boxes, tunnels, bridges etc

Secondary Fires Hours - The following guidance is drawn from the Fire Damage Report (FDR) system and is provided here for the purpose of defining Primary and Secondary. These definitions are now used in the Incident Reporting System (IRS).

Secondary Fires - Secondary fires, is a term used to describe a group of incidents that usually require an initial attendance of one appliance; they include rubbish fires, grass fires and abandoned vehicles fires.

Secondary fire locations / properties are those that fall in the following categories:

- ***Single derelict building*** - Includes single building under demolition.
- ***Grassland etc*** - Includes grassland, heathland, peatland, scrub, hedge, open land, railway

- embankment/cutting, road verge, singletree, straw/stubble incidents other than where 'intentional' (see below).
- ***Intentional straw/stubble burning*** - Includes solely incidents where there was a deliberate act by the agricultural community to burn straw or stubble.
(N.B. Excludes any other deliberate ignition of straw/stubble, which should be recorded in 'grassland').
- ***Outdoor structure*** - Road furniture, lamp standard, traffic sign, traffic light, control box, telegraph pole, pylon (but not electricity pylons – these are a Primary location), transformer on pole, hoarding, fence, stand-alone sign (including estate agents'), outdoor cable - on, above or below ground, park furniture, playground furniture, railway furniture, private outdoor furniture including barbecue, tree house, play house, hutch, kennel, coal bunker, road surface, drain, scaffolding, wall, gate, yard door, cattle grid, single gas cylinder, derelict property/structure other than building or vehicle (including caravan), vagrant accommodation e.g tarpaulin, cardboard shelter, other simple outdoor structures.
- ***Refuse, refuse container*** - Includes loose rubbish, dustbin, 'wheelie bin', skip, and bonfire/refuse burning out of control, fires at Primary locations involving solely incendiary devices or inflammable liquids.
- ***Derelict vehicle*** - Includes derelict cars, Lorries, buses, trains, boats, aircraft etc.

NFRS continue to aim for a single attendance measure, as endorsed by the combined Fire Authority (CFA), stating our aim to reach 90% of incidents within 10 minutes. During 2013 the actual level achieved for all incidents was 76%, with fires in dwellings seeing a marginally better performance of 86%.

The table highlights those appliances/locations that (on average) exceeded our 10 minute measure.

Appliance	Time in Mins.	Appliance	Time in Mins.
T01P2	9.81	T12P2	11.65
