

Appendix C – CIA – SEND Schemes

There are three SEND schemes linked to this approval, two are new builds and the third is a refurbishment of an underused building. All three schemes are on the site of academies within the city.

The infographic shows the relative costs and benefits of the developments on 9 different categories with respect to Climate: Behaviour and Cultural Change +1, Built Environment +2, Business and Internal +1, Carbon removal 0, Consumption 0, Energy 0, Resilience and Adaptation 0, Transport 0, Waste Water +1.

There is an opportunity to use this engagement with academies to discuss the importance of reducing Carbon and the aim of Nottingham to be Carbon Neutral by 2028.

The new buildings will support a fabric first methodology of reducing carbon. In addition where possible and affordable solar panels will be included within the programme to generate electricity.
