

## **Background to the decision**

Nottingham City Council operates a multi-million pound parking operation encompassing both on and off-street parking spaces. Parking Services are responsible for the management and control of; three multi storey, one underground, four surface and fifteen district car parks as well as over 1,400 on-street pay and display parking bays.

The authority as a parking operator is in direct competition with the Private Sector, in an ever challenging market, in providing parking space.

The need to closely monitor competitor's tariffs and products is an ongoing priority for the parking team to ensure that we remain at the forefront of the market as one of the leading parking providers in Nottingham.

The existing tariffs, patronage of the car parks and the tariffs of private parking operators in each geographical area have been analysed to inform the proposals contained within this report and supporting appendices.
